

## Install "live server" extension

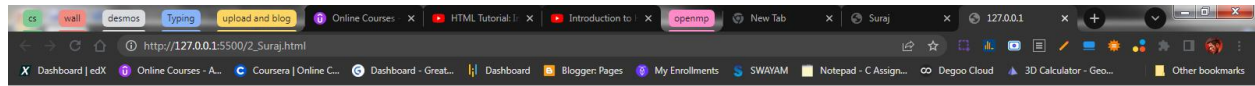

After installing “live server” extension, we will see “Go Live” button on rightmost bottom of VS Code

When we click on “Go Live” button, it will open code in browser (Chrome) for what we have written in code

No need to click on “Go Live” button every time, it will automatically update code output on browser

If we click again on “Go Live” button again, it will stop the server. So, after that if we try to open or reload same webpage it will not open
