

iframe

- ⇒ iframe in HTML stands for Inline Frame. An inline frame is used to embed another document within the current HTML document
- ⇒ iframe tag defines a region within the document in which the browser can display a separate document
- ⇒ We can insert iframe in html by using <iframe> tag & it is a container tag , so it must close with </iframe>

Attribute :

src : src attribute is used to specify the URL of the document

height & width : Specify height & width of iframe

frameborder : If you want border around iframe , then enter “1” as value , otherwise enter “0” as value

scrolling : If you want to show scrollbar , then enter “yes” in value , otherwise enter “no” in value
