ROLE OF CSS

- Cascading Style Sheets which is known as CSS is a style sheet language that used to handle the presentation of the web page containing HTML.
- It makes our websites beautiful and modern looking.

CSS SYNTAX

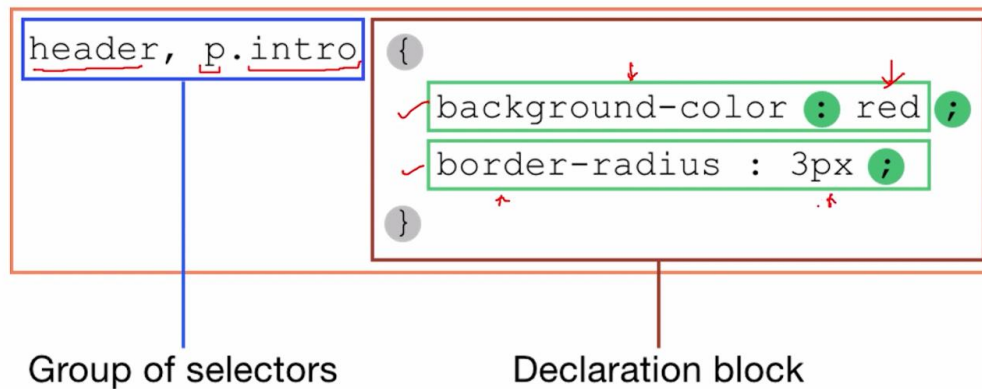

SELECTION PROPERTY VALUE

↓ ↓ ↓

p { color: blue; }

Where? This: Set this value.

CSS SYNTAX

THREE WAYS TO ADD CSS TO THE MARKUP

<p style="..."></p>

HTML code

- 1) Inline CSS: CSS is added to the elements directly using style attribute
- 2) Internal CSS: CSS is kept inside the head tags in <style> tags
- 3) External CSS: CSS is kept separately inside a .css style sheet

THREE WAYS TO ADD CSS TO THE MARKUP

`<p style="color: red;"></p>`

HTML code

- ✓ 1) Inline CSS: CSS is added to the elements directly using style attribute
- ✓ 2) Internal CSS: CSS is kept inside the head tags in `<style>` tags
- ✓ 3) External CSS: CSS is kept separately inside a `.css` style sheet

S1 → write CSS in .css file
S2 → include that CSS file to Markup
